

Product Change Notification

PCN No: 159

Fox Reference ECN and or NPN No: 153

Report Date: April 01, 2002

Subject: SMD Product Part Marking

Products Affected:

F3345	F3355	F4100	F4101
F4200	F4300	F3400	F3410
F530L	F550L	F5500H	KFO90
FSO2	FSO3		

Reason for Change: To enhance product traceability by an improved date code and production lot system marking.

Product Change: The electrical functionality of the products remains unaffected and exiting specifications remain applicable. This product change is intended for improved marking identification only. All product packaging will continue to identify part marking denoting frequency stabilities and operating temperature. The product date code marking has changed from a two digit alpha-character code to a three digit character date code and production lot system marking identifier. All other pin-thru oscillator products will remain unchanged in their product marking.

Schedule of Change: Customers can expect to receive the new marking format beginning in May 2002. Due to inventory replenishment rates, we can anticipate a transition period of 6-8 months where both product part markings can be shipped to the customer.

Response: It is our intent to minimize any confusion this new part marking change will impose on our customers. If you feel this change will in any way affect your business systems and application, please contact Fox Electronics engineering department. If needed, supporting marking documentation can be made available.
